Continuation of note 3:

Applicants' proposed After Final Amendments to the claims introduce substantive changes that raise issues that require further search and/or consideration and therefore will not be entered. For example, applicants have added new claims 18 and 19. These new claims would require further consideration and/or search.

Continuation of note 7 and 11:

Rejection of claims 1, 2, and 5-16 under 35 U.S.C. §101

Applicants have responded to this rejection by stating that the claims result in a conveyance of light which is a real-world result. However, the conveyance of light does not provide a result of the computational algorithm that is communicated to a user. Thus, the conveyance of light does not provide a real-world result for the computational algorithm of the instant claims. Because the instant claims do not provide a real-world result, the instant claims do not have a tangible result.

This rejection is maintained.

Rejection of claim 2 under 35 U.S.C. §102

Applicants have responded to this rejection by stating Lybarger et al. do not describe separation points as defined by intersection of the spectra. The Examiner disagrees. On page 149, Lybarger et a. state that based on their spectral data (i.e. the wavelength separation points), "it may be pssible to design optical filter combinations to monitor expression of EGFP and EYFP indenpendenty." On page 151, right column, Lybarger et al. disclose optical filter combinations that separate the emmision spectrum based on their spectral data. Thus Lybarger et al. have taught determining wavelength separation points as well as conveying the light according to the separation points.
